case summary: "Uterine arterial embolization was performed to address intraoperative and postoperative bleeding." instead of address i think you need to use another verb here. Lab ex: "Then the patient underwent seven cycles of chemotherapy with 5-Fu and KSM" would be better to add the time period (i.e. once a week/) of cycles here. TREATMENT: "The patient underwent a suction evacuation under ultrasound guidance." what is the medical device you used for this, for ex: "XX french karmen cannula or aspirator) during that massive bleeding what is the hgb level of the patient before and after the ES replacement? It would be better to give more details about UAEmb. Did you use any folley catheter like baloon to stop bleeding? At discussion part it would be better to make comparision with other 5 cases at the literature wth your case (what are the differences and similarites) At introduction part it would be better to give brief info about cesarean scar pregnancies.(Sel G, Sucu S, Harma M, Harma Mİ. Successful management of cesarean scar pregnancy with vacuum extraction under ultrasound guidance. Acute medicine & surgery. 2018 Oct;5(4):358-61.) at case or discussion section you can write about your differential diagnosis like (Sorbi F, Sisti G, Pieralli A, Di Tommaso M, Livi L, Buccoliero AM, Fambrini M. Cervicoisthmic choriocarcinoma mimicking cesarean section scar ectopic pregnancy. Journal of research in medical sciences: the official journal of Isfahan University of Medical Sciences. 2013 Oct;18(10):914.) for cesarean scar GTD you can also use these references -Qian ZD, Zhu XM. Caesarean scar choriocarcinoma: a case report and review of the literature. European journal of medical research. 2014 Dec 1;19(1):25. -Jin FS, Ding DC, Wu GJ, Hwang KS.
