SPECIFIC COMMENTS TO AUTHORS

This is an interesting case-report. The authors should include the type of trauma causing the injuries, and also if these injuries were restricted to upper limb? or there were other organs or structures involved?. It is required when you approach the study of trauma-related thrombophilia. The fractures were a consequence of the traumatism event, even when the initial D-dimer levels were normal, the late PTE may be preceded by an undetected DVT. The patient was not obese, his BMI was below 30.
