SPECIFIC COMMENTS TO AUTHORS

The paper report a rare combination of coronary aneurysm and myocardial bridge. The description of anatomic abnormality is confuse, from the text is not obvious that the lesions interest the same segment of LAD. In the description of coronary angiography it should better reported. Is V5-V9 a mistake? How the author explain the relation between symptoms and coronary anatomy considered that the minimal diameter at IVUS is > 4 mm? Had the patient a functional study (SPET or scintigraphy, NMR ?) that suggest the presence of ischemia and/or exclude microvascular disease? The protective effect of myocardial bridge on the evolution of coronary aneurysm is speculative. The term miraculous should be omitted

SPECIFIC COMMENTS TO AUTHORS

This is a report for a case of coronary artery aneurysm and myocardial bridge in the same segment of a 54-year-old female patient who underwent coronary angiography and intravascular ultrasound examination. This paper should be of great interest to our readership. There are however minor additional information needed meaning editing and revision of the manuscript. 1. This sentence is unclear "a 54-year-old woman was hospitalized with chest pain after activities for more than 10 years." please clarify. 2. please mention the dose, frequency for all prescribed medications and normal reference ranges for lab results.

SPECIFIC COMMENTS TO AUTHORS

The authors answered satisfactory to all questions . In my opinion however in the text
