SPECIFIC COMMENTS TO AUTHORS

In the current report, the author described one case with cavernous hemangioma in the manubrium, especially emphasized the dynamic features of MRI. The quality of figures and English writing is good. 1. More MRI scans in Fig.2 should be shown to highlight the dynamic features. 2. The other two cases reported in the available publications should be briefly discussed. 3. How about the operation? The intraoperative images ? 4. The IHC stainings should be provided in the pathology figure.
