SPECIFIC COMMENTS TO AUTHORS

At the present, there is only a few reports on the differences in endovascular treatment for different etiological classifications, especially in the anterior cranial circulation, aorta atherosclerotic stenosis, and acute thrombosis. The efficacy of Solitaire AB stent-release angioplasty in patients with acute middle cerebral artery atherosclerosis obliterative cerebral infarction were not investigated yet. The outcome of the acute middle cerebral artery atherosclerosis occlusive cerebral infarction cases was studied in this research by using Solitaire AB stent-release angioplasty during endovascular treatment. The inclusion and exclusion criteria are described in detail, and methods are clear. The results are brief, but interesting. The reviewer recommends to accept this manuscript after a minor revision. Comments: 1. Manuscript is overall very well written, however, a minor editing is requires. Some minor language polishing should be revised. 2. In the results section, the figures are not described in the main text. Please add a short paragraph to describe them. 3. The discussion section should be divided to some paragraphs. And a conclusion should be made in the main text. 4. References have to be edited also.
