SPECIFIC COMMENTS TO AUTHORS

The epidemiological analysis suggested that endometrial carcinoma as a common malignant tumor in women. With the Increasing work stress and changing living habits ,the endocrine disorders have been led to universalization and the incidence rate of this disease increased significantly. The selection of different ultrasonic examination schemes in clinical endometrial lesions has a certain effect on the diagnostic effect. In this study, the authors use comparative study to further clarify the diagnostic efficacy of these two color ultrasound examination schemes. This study is very interesting, and well designed. Comments: (1) The title can be changed to "diagnostic value of different color ultrasound diagnostic method in endometrial lesions", and running title change to "color ultrasound diagnostic method in endometrial lesions". (2) The background is missing in the abstract. Pleaes check and revise. (3) Please describe and conclude the figure 2 and figure 3 for 2.5 "The display of the results of 2 case through stransvaginal ultrasound" in the main text. (4) Please add the title of conclusion. (5) The manuscript requires a minor editing.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of the diagnostic value of different color ultrasound diagnostic method in endometrial lesions. This study is well designed and the results are interesting. The results are discussed well with updated references. Minor comments: 1. There are some minor language polishing which should be revised. 2. The tables should be checked and edited.
