

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 65564

Title: The Effect of Exercise training on Left ventricular remodeling in Patients with Myocardial Infarction and Possible Mechanisms

Reviewer's code: 02543500

Position: Peer Reviewer

Academic degree: MD

Professional title: Assistant Professor

Reviewer's Country/Territory: Australia

Author's Country/Territory: China

Manuscript submission date: 2021-04-08

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-04-12 00:43

Reviewer performed review: 2021-04-25 07:03

SPECIFIC COMMENTS TO AUTHORS

In this study, the effect of exercise training on left ventricular remodeling in myocardial infarction patients and the possible mechanisms was investigated. The study is very interesting. The methods are very clearly described, and the results are well discussed. This study concluded that the early rehabilitation exercise after acute myocardial infarction can inhibit progression of left ventricular remodeling and maintain left ventricular function. Overall, this manuscript is very well written. Comments: 1. Some minor language polishing should be revised. And take attention about the using of some punctuation marks. 2. All the P values are NS, in the table 2, what's the meaning for list it? You can make a note for this, and delete this column from the table. 3. It seems the data is Fig 2 and Table 5, Fig 3, 4, 5 and Table 6 are the repeated. Please check if the fig 2-5 can be deleted.
