SPECIFIC COMMENTS TO AUTHORS

General Impression: The authors reported an interesting case of a myelolipoma rupture causing acute flank pain, managed with laparoscopic resection. The manuscript is very informative and nicely-written. The title is clear and represents the manuscript's content. The abstract is concise and brief. The introduction gives a good background about the pathology. The patient's case is well-presented, and most of the relevant clinical information are mentioned. The discussion gives valuable information about the pathogenesis of the myelolipoma and its radiologic diagnosis. The conclusions are reasonable and clearly-based on the authors experience. I think the manuscript is potentially suitable for publication and would enrich the journal's content. I only have some minor comments that hopefully would help in further improving the manuscript.

Comments: 1) In the case presentation section, could you indicate whether the patient had any trauma on his abdomen or flank that could have induced the tumor rupture? 2) In the physical examination subheading of the case presentation section, could you please mention whether there were any cutaneous signs over the right flank? 3) In the physical examination subheading of the case presentation section, could you please add more details about the pain characteristics and how it differed from the ureteral stone pain? 4) In the imaging examinations subheading of the case presentation section, could you please state in more details what were the radiologic findings? i.e., what was the mass size? Did you perform contrast-enhanced CT scan? If yes, how did the mass appear after injecting the contrast agent? Was the mass homogenous or heterogeneous? It is better to mention these in the main text and in the related figure legend. 5) Could you add a figure demonstrating the laparoscopic appearance of the tumor?

SPECIFIC COMMENTS TO AUTHORS

The manuscript presented a rare and interesting case of spontaneous rupture of adrenal myelolipoma as a cause of acute flank pain, but, it does not meet the requirements of publication due to citing inappropriately the references in the introduction and discussion sections. Please cite the latest references, especially references in the past 3 or 5 years. Also, please make minor revision in the " FINAL DIAGNOSIS" paragraph, for example, ", confirmed by pathologic examination". Pathologic result should be presented in the " FINAL DIAGNOSIS" paragraph, instead of " TREATMENT" paragraph.
