SPECIFIC COMMENTS TO AUTHORS

The authors have described a case of NEN of breast, an uncommon tumor with treatment and follow-up of about 8.5 years. This appears to be the strength of this article and the authors have comprehensively demonstrated the course of the disease and the management during this timeline. This novel treatment, though requires validation in a larger cohort, appears to be effective in the index scenario. The study is presented in a lucid and scientific way and I have no specific comments.
