SPECIFIC COMMENTS TO AUTHORS

The authors performed a precise meta-analysis of the association between anxiety and social isolation due to COVID 19 pandemic. They identify populations and variables at risk to mental health. Just a minor revision: why in the figure 2 there is figured Italy as one of the country from where derived one of the seven article selected for the revision but it does not result from the table nor appendix? There is just a spelling error in page 14 for the word "litetature"

SPECIFIC COMMENTS TO AUTHORS

comments By searching and sorting out the relevant literature, the author concluded that there was a strong relationship between social isolation and anxiety symptoms during the COVID-19 pandemic. The structure of the article is clear and reasonable, the language is professional, concise, and fluent, the reference format is standardized, the picture is clear and standard, the table is scientific and rigorous. It is a review worth expecting. However, the content of the article is not substantial and needs further revision. Major revision: The discussion part seems to be descriptive, and it is suggested that either explain why there is a correlation (described in the manuscript) between social isolation during the COVID-19 pandemic and symptoms of anxiety from the pathogenesis or analyze why there is a correlation from the study variables. Minor revision: 1. Given the role of the government in strategic mental health measures, it is necessary to concentrate efforts to plan and execute interventions, which is ambiguous. It is recommended (at least) a brief description of what interventions are to be implemented (such as psychological counseling) and how to implement them (such as the use of remote systems for psychological counseling). 2. There are a small number of spelling mistakes in the manuscript, such as the lack of spaces before the full stop at the end of the sentence and the first capital letter of the next sentence.
