SPECIFIC COMMENTS TO AUTHORS

This study entitled “Thrombolysis and embolectomy in treatment of acute stroke as bridge to open-heart resection giant cardiac myxoma: Case Report” seems to have been generally well executed and written. Furthermore, I believe that this topic would be very interesting for the readers. Finally, in my opinion, the abovementioned manuscript should be accepted for publication in the current form in your respected journal.

SPECIFIC COMMENTS TO AUTHORS

1. The "Introduction" part needs citation, including most of the clinical facts (young stroke= 18-45 years old, 10-14%, 20%). 2. Why did the patient had involuntary choreiform movement of the "left upper limb"? It is better to show the post-operative MRI to demonstrate the final brain ischemic lesion? 3. How can you explain the high level of CRP (78.61mg/L)? 4. Please write down the dose of alteplase (ex: 0.9 mg/kg). 5. Please simplify the figure 1, eight CT cuts are too more. 6. Please make the Figure 2A cleaner, the blood spot in the bottom of the figure is redundant. 7. Please cut the unnecessary part of figure 2C. 8. "There was no recurrence at 1 year follow up." What is your medication used for stroke secondary prevention?
