SPECIFIC COMMENTS TO AUTHORS

Dear Authors, In the manuscript you describe an interesting case of a patient with a severe class II and biprotrusion, thus is a challenge for the ortodontist. As you corretly state, it would be treated by a combination of orthodontic and surgical treatment. I appreciate the proposal of four different clinical option, and the patent's involvment in the decisional process. In the description of the therapy, you highlight the main problems, and clearly explain how you have overcome them. The use of mini-screws is widely reported in literature, and your choice of references is appropriate. The use of the anterior auxiliary arch to control the torque of the upper incisors is original, and you demonstrated that it can works in such a cases. I suggest you to discuss the difference among this solution and other torque control systems, e.g. hybrid appliances. I appreciate that you put in evidence the limit of this treatment, that didn't allow to correct completely the class II relationship. The time of treatment was quite long, but necessary to complete the case in a non surgical approach to the problem.
