## **SPECIFIC COMMENTS TO AUTHORS**

This study introduces a management mode of “An integrated system, three separated responsibilities” for the prevention and control of novel coronavirus pneumonia. This mode ensures the efficient operation of the fever outpatient clinic, and early screening of novel coronavirus cases, and effectively curb the transmission of novel coronavirus in the prevention and control of novel coronavirus pneumonia epidemic. The design of the study is very well, and the results are very interesting. This study will give the clinicians a guideline for in the special coronavirus epidemic. Minor comments: 1. The manuscript requires an editing, both the language and the format. 2. The title of the study is too long, please short it, and the conclusion of the abstract is too long, it should be shorted. 3. A subheading of introduction is missing, please add it. 4. Please re-organize the subheadings of the methods section. The headings seem not very clear. 5. Please check revise the results section. What’s the meaning of “Comparison of the Knowledge of New Coronary Virus in Fever Outpatients Before and After 5.3.1 Management Model” and “Comparison of 5.3.2 Knowledge of New Coronavirus between Two Groups”? Are those subheadings? If so, please make a revise, or delete them.
