PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 65976

Title: Long-term survival of a patient with pancreatic cancer and lung metastasis with

rare gene alterations after resection and apatinib therapy: a case report

Reviewer's code: 03468910 Position: Editorial Board Academic degree: PhD

Professional title: Assistant Professor, Surgeon

Reviewer's Country/Territory: Italy

Author's Country/Territory: China

Manuscript submission date: 2021-03-22

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-06-22 11:09

Reviewer performed review: 2021-06-23 14:58

Review time: 1 Day and 3 Hours

Scientific quality	[] Grade A: Excellent [Y] Grade B: Very good [] Grade C: Good [] Grade D: Fair [] Grade E: Do not publish
Language quality	[Y] Grade A: Priority publishing [] Grade B: Minor language polishing [] Grade C: A great deal of language polishing [] Grade D: Rejection
Conclusion	[] Accept (High priority) [] Accept (General priority) [Y] Minor revision [] Major revision [] Rejection
Re-review	[]Yes [Y]No
Peer-reviewer	Peer-Review: [Y] Anonymous [] Onymous
statements	Conflicts-of-Interest: [] Yes [Y] No

SPECIFIC COMMENTS TO AUTHORS

The topic of this manuscript falls within the scope of World Journal of Clinical Cases. The Authors reported a rare case of a ductal adenocarcinoma of the pancreas with lung metastases with long term survival (greater than 8 years). The patients has BRCA1-associated protein 1 (BAP1) and phospohatidylinositol-4,5-bisphosphate 3-kinase catalytic subunit alpha (PIK3CA) gene mutations and RAF 1 fusion. The patient with three gene alterations (BAP1- PIK3CA and RAF-1 fusion) in ductal adenocarcinoma of pancreas had long survival with APATINIB. In Letterature, untill now, there are no reports of a long term survival in patients with pancreatic ductal adenocarcinoma with RAF-1, BAP1 and PIK3CA aberrations treated with APATINIB. It is a very interesting manuscript. The Authors must correct in the Abstract afatinib with APATINIB. Case is good. Discussion is well organized. Complete the References.

SPECIFIC COMMENTS TO AUTHORS

1)The tumor is large for normal pancreatic ductal adenocarcinoma. Please describe in detail the pathological results including whether there are cysts or necrosis in the tumor. There were no pictures of histology. The macroscopic and microscopic images of the primary pancreatic adenocarcinoma should be added. https://doi.org/10.25/2 (Page 2, line 29)
