SPECIFIC COMMENTS TO AUTHORS

The authors have performed a study to demonstrate the clinical characteristics of SIC patients. There is a wealth of data presented. Discussion section could elaborate on the possible postulated mechanisms for development of SIC. Manuscript needs extensive editing for grammar and language. Among others, recommend the following corrections

Abstract Background 2nd line : lack =====> lacking Methods: Describe secondary outcomes in methods Results 4th line : had a Significant =====> were of older age Background mortality of SIC varied greatly ==> patients with SIC further investigate these issues=====> recommend grammatical corrections discussion that patients in the SIC group received more norepinephrine and vasopressin use[14]. In the study by Pulido and colleagues, patients in the SIC group received more norepinephrine treatment =====> should be more patients in SIC group received norepinephrine and vasopressin And it is interesting that we found liver failure might be a protective factor of SIC.=====> please correct grammatical errors
