#### **SPECIFIC COMMENTS TO AUTHORS**

Dear authors, congratulations on your work. It is an interesting subject and they describe a nice alternative, which I would consider to apply in daily practice. I would like to see this article published, but after some changes. The biggest change needed, I believe is the language. Many spelling and grammatical errors that make reading of the article difficult and can in some cases lead to misunderstanding. Language check of a native speaker or professional editing would be highly appreciated. Another comment is that the statistical methods used, are not presented in the text nor the tables. They should be added.
