#### **SPECIFIC COMMENTS TO AUTHORS**

This is an interesting case report of veno-venous-extracorporeal membrane oxygenation treatment for severe capillary leakage syndrome. Early identification, active treatment of primary disease, fluid resuscitation and management, increasing plasma colloidal osmotic pressure, improving circulation, and ensuring tissue oxygen supply are key elements in the clinical treatment of capillary leak syndrome. Extracorporeal membrane oxygenation plays an important role in the hypoxemia of capillary leak syndrome. The case is very well described, and well discussed. Comments: 1. A minor language editing is required. 2. The "Background" with the references in the abstract should be moved to the "Introduction" section of the main text. And the background of the abstract should be re-write. It should be a short description of the research back ground. 3. Reference should be updated.
