SPECIFIC COMMENTS TO AUTHORS

Case report should be in essay format and the non significant details should be removed
Instead of the heading multidisciplinary opinion can just write differential diagnosis
Was frozen section performed? The compression seen on the MRI is not central. So I feel
that the symptoms should have been predominantly on one side instead of bilateral.
Your comments on it being bilateral What about the symptoms on the lower limb...due
to compression in the cervical spine there should have been upper motor neuron signs
on the lower limb

SPECIFIC COMMENTS TO AUTHORS

Dear editor and authors, The present case report presented nicely a rare case of intravascular papillary endothelial hyperplasia (IPEH) in the cervicothoracic spinal canal, treated via complete resection with a favorable outcome. I have the following comments regarding your manuscript. In Abstract, Case SUMMARY, please change “A 27-year-old man presented with acute-onset neck pain and numbness and weakness in his extremities.” to “A 27-year-old man presented with acute-onset neck pain, numbness and weakness in his extremities.” Regarding the figures, it is recommended to enlarge the images of Figure 2. Please zoom in to improve the quality to be easier to read. The present images of Figure 2 are too small and very difficult for me to identify the lesion and delineate the normal structures. Orientation labels may be helpful. Finally, I also suggest labeling the pathognomonic gross findings in Figure 2AB, and the pathognomonic histopathological findings in Figure 3AB. I am happy to see that the informed written consent has been obtained. However, the content of the signed informed consent provided should be regarding the will of the patient and/or family to agree to publish his information in a medical journal, but not the consent to agree for the surgery.
