SPECIFIC COMMENTS TO AUTHORS

Thank you for inviting me to review the manuscript entitled “A case of Mycobacterium abscessus infection after facial injection of Argireline”. This topic is interesting but there are a couple of major issues that need to be addressed.

- Line 36: Today, readers place very low value on claims of primacy ("First case...") and readers are interested in disease emergence into new areas or populations and factors that influence emergence. Craft your next revision accordingly, without using the word "first" or similar language implying a claim of primacy.
- Line 40: Please include the drugs name and treatment outcome in the abstract of the case report.
- Line 56: Mycobacterium tuberculosis should be italic
- Line 82: PAS staining should be fully written when mentioned for the first time.
- Line 84: “bacteriological culture”. The name of culture should be mentioned.
- Line 84: “M. abscessus was identified by a Vitek MS MALDI-TOF”. Because of the best and accurate method for detection of NTM isolates is MLSA method, why did the author use this test for NTM detection? What is the specificity and sensitivity of this test?
- Line 86: Doing DST for RGM according to CLSI before treatment is necessary. How did the author prescribe the drugs?
