**COMMENTS TO AUTHORS**

Dear Dr. Schiariti: I think you made a precise mini-review and showed the result of your study regrading prognostic significance of post-PCI thrombocytopenia. The topic is important for interventional cardiologists and may lead the following studies. A minor comment is just made for the last sentence "Finally, it seems necessary to also address other potential correlates of TC: first of all reduced red blood cells count" which was not well discussed in your review and should be removed.
