COMMENTS TO AUTHORS

This is a review paper on a Frozen shoulder. This review is mostly very general based on the classic sources. More specific and interesting issues such as the role of different growth factors (PDGF, etc.) and the recent research on the cellular level are missing. In addition the difference between the clinical entities of “stiff shoulder” and “frozen shoulder”, primary or secondary is not discussed as expected in the review paper. Information on different patterns of fractures that might evolve following MUA and their incidence are of great importance and should be discussed as well. After these additions the paper could be considered. In the present form the paper is not ready for publication.
