SPECIFIC COMMENTS TO AUTHORS

Review manuscript nr 55072 Learning and competence development via clinical cases – which ingredients should be investigated to establish good medical doctors? Reviewe's code 01760667 Abstract It is unnecessarily complicated written. Facts and theories are aggregated making it hard to digest. The abstract would merit from a more summarized description of the content of the article, leaving some of the enumerated elements out. Manuscript It is an interesting and initiated survey of the higher education history and development throughout the past couple of decades but the language, length of phrases and piling of theories are unnecessarily complicated. Furthermore, the spelling should be revised. A language review would enhance the readability. On the whole it is an UpToDate description of the current knowledge regarding higher education and the authors proposes research strategies to enhance the evidence-based components to optimize teaching and learning. Apart from a language revision the manuscript gives a valuable survey of the field of higher education. Minor comments Second paragraph An abbreviation should be introduced in brackets after the corresponding word the first time it is used (i.e. CBL and LLL) Page 4 under the heading Competencies Spelling! (Szenario) There are also other spelling faults
