#### **SPECIFIC COMMENTS TO AUTHORS**

Artificial intelligence (AI) and its learning programs, especially convolutional neural network provides a huge potential for visual data analysis. It is gaining popularity among all specialties dealing with oncology patients. This article provides an in-depth analysis of the current literature on AI use for pancreatic lesions. It is written in an easy-to-read format with a perfect academic English. I have two corrections to suggest:

1. On page 16 of the manuscript, the abbreviations G1, G2, G3 are not displayed in the list of abbreviations, nor they are mentioned within the text.
2. Use of abbreviations in the titles and/or subtitles is inappropriate. Please re-write them without abbreviations.
