COMMENTS

COMMENTS TO AUTHORS:

The authors demonstrated a prospective study evaluating emotional disturbance in subjects undergoing defecating proctography. In my opinion, a prospective study will give us more important information in this field. I have no claims.

COMMENTS

COMMENTS TO AUTHORS:

It is a prospective study to evaluate the emotional disturbance in subjects undergoing defecating proctography. But I wonder whether the sample size of 45 is enough? According to the general requirements of scale, one item should involve 10-15 samples. Moreover, it is not enough to mark the P value only, the test method and statistics should also be described in detail.
