COMMENTS TO AUTHORS

In this manuscript, authors have presented the new procedure of pancreaticojejunostomy in pancreaticoduodenectomy to prevent pancreatic fistula. They concluded new procedure could decrease the occurrence rate of pancreatic fistula. The results is basically interesting for readers, however, several issues should be clarified. Major: 1.Authors should describe their previous procedure of pancreaticojejunostomy to compare this new method. 2.It is difficult to understand figures of this procedure. It is better to show the schema. 3.In Discussion, authors should refer to and consider the other new methods of pancreaticojejunostomy showed in journals.
