COMMENTS TO AUTHORS

Need to include obstetric and gynecologic history including children, menstrual problems etc. While photo shows normal uterus and adnexa, operative findings need to describe these organs. What anastomosis was employed ? You left an inflamed mass, why, what do you think it was, where was it, was the ureter isolated at surgery ? What therapy was she given after surgery, what are her desires as regards further fertility? By instantaneous section, do you mean frozen section ? You discuss the link between CD and oral contraceptives, this statement requires a reference.

COMMENTS TO AUTHORS

It is an interesting rare case. It needs some minor language polishing: page 3-line2 aetiology,page 4 line 12-tumour,page 4-pathologic studies-line 3 or sometimes with PAS,page 5-line 14 was distributed,page5-Discussion- line 1 and it is assumed,page 6-line 14 Histological patterns. page3 case report line1- gravida? para? Please add. page 6 line 13 is a high variable.
