COMMENTS TO AUTHORS

The review by De Iudicibus et al describes the possible relationship between microRNA expression and glucocorticoid response/resistance. The review is well written and clear. Minor points In the paragraph dealing with the mechanisms of action of GC, the recent studies by Cidlowsky group deserves to be mentioned (e.g. Cell Death Dis. 2013 Jan 10;4:e453.).

COMMENTS TO AUTHORS

This is an extensive and well-organized review about the relationship of miRNA and IBD. There are a few of typos, e.g. the proper use of "also".
