COMMENTS TO AUTHORS

This is a case report written quite friendly. Pictures are clear and help the text. My single suggestion is an advise from the authors to the other surgeons to prevent all these problems. What is their recommendation to avoid all those complications? And, do they have some more additional preventive approaches after this experience? Were they do any chang in their sugical practice or not?

COMMENTS TO AUTHORS

It would be necessary to clarify some aspects of the case. 1. Was there any intraoperative complication? 2. It would be interesting to know the body mass index of the patient (BMI). 3. What was the size of the tumor extracted? 5. What was the surgical time? 6. What type of prophylactic antibiotic was employed throughout the case? 7. It is necessary to specify more precisely the follow up time. From April 2009 till date? 8. It would be interesting to readers if the authors would summarize changes in their daily practice (change the stuff pancreatic closing?..use of RF-assisted device to sealing pancreatic parenchyma?)
