COMMENTS TO AUTHORS

I read with great interest the manuscript entitled “IL 28B polymorphisms as predictor of response in HCV genotype 2 and 3 infected patients” by Alessandra Mangia et al. The manuscript is interesting and well structured. Some amendments need to enhance its comprehension and scientific potential value. In particular: ? The Summary should be added, as its present form lacks. ? The extended definition of acronyms used throughout the manuscript should be introduced i.e. HCV-1, Peg-IFN, RBV, GT-2, GT-3, and many others. ? When more Authors have done a manuscript, the indication et al. should be reported, i.e. “In the study by Chen no association between SVR and IL28B CC was found in the subgroup of GT-2 and 3, although it was shown that TT at rs8099917 SNP is associated with a favourable response in GT-2 Asian subjects”. ? Several orthographical and grammatical errors have been found throughout the manuscript.

COMMENTS TO AUTHORS

This authors' article is well written. I agreed with the strategy using Peg-IFN and Ribavirin for patients infected with genotype 2 or 3 HCV.
