COMMENTS TO AUTHORS

Said A reviewed about non-alcoholic fatty liver disease (NAFLD) and liver transplantation. The author discussed about post transplant survival, de novo NAFLD, pre-transplant risk, and so on. Generally, this paper is well-written, and useful contribution, which I think is entirely suitable for publication in World Journal of Gastroenterology. Minor point PNPLA SNP section. The author should show the genotype of more "severe prognosis" clearly.

COMMENTS TO AUTHORS

This is an excellent review article on NAFLD and liver transplantation. It provides comprehensive, up-to-date and in-depth coverage of this topic and will be very informative for clinicians, but also basic scientists. The article is well structured and balanced. The author correctly points out “the importance of liver biopsies and possibly imaging in accurately diagnosing NAFLD”. Perhaps he could elaborate on this and, furthermore, briefly comment on the development and performance of non-invasive biomarkers for evaluation of NASH.
