**COMMENTS TO AUTHORS**

The study by Sekine Ryosuke reported a case of a patient suffering primary hepatic choriocarcinoma, which is a kind of very rare, especially in men, and malignant trophoblastic cancer. The description of this case is very interesting for the detection and differentiation of this type of aggressive tumour among other primary liver cancers and the conclusions are enlightening for the clinical management of these patients. I only have few suggestions to polish some points of the manuscript: Case Report: 1- Change "Ca19-9" to "CA19-9" 2- Insert an space in "3cm", change to "3 cm" Discussion: 1- Change "cis-platinum" to "cisplatinum" 2- Change "vincrstine" to "vincristine"
