COMMENTS TO AUTHORS

This is an interesting study. Although rare there is a clinical relevance.

COMMENTS TO AUTHORS

Zhihuan Sun and coworkers analyze 68 cases of Intestinal T-cell lymphoma (ITCL), a rare non-Hodgkin lymphoma of T-cell origin which currently is difficult to diagnose. In a well-conducted study the authors analyze a representative population of Chinese ITCL showing a complete compilation of epidemiological, histological and clinical findings which are useful to clarify the state of the art in this rare pathology. Minor points: 1. There are some grammatical errors and misprints throughout the text that should be corrected. For example: "INTRODUCTION", "colonoscopy", "hematochezia"... 2. Since data showed by the authors are extensive, It would be recommendable to include a table with the main findings. If that were at all possible, it would be a very elegant addition to the study. 3. In Conclusion section, authors should discuss in greater depth the results of their study.
