COMMENTS TO AUTHORS
Please refer to more some references on certain tumor suppressor gene for liver cancer recurrence and prognosis.

COMMENTS TO AUTHORS

This is a review article described the application of transcriptomics, proteomics and metabolomics in the study of HCC recurrence. Authors showed the limitations of each area of research and the challenges faced in translating the research results for clinical application in predicting HCC recurrence. Although the article is well writing, I have three suggestion.   1. Can authors mention the changes of transcriptome after HBV or HCV treatment?   2. Any common candidate genes were found in three different methods.   3. Advantage and disadvantage of three different methods should make a table.
