COMMENTS TO AUTHORS

To: Professor Lian-Sheng Ma Editor board World Journal of Gastroenterology Title: "An update on nutritional status, body composition and growth in paediatric Inflammatory Bowel Disease". Dear Editor, We have read through the manuscript and we think that it is a well-written manuscript. Nevertheless, minor changes should be performed: 1) Although this is not a systematic review, the manuscript should be better organized: a. What kind of database did the authors used? b. Which were the key-words adopted? c. How many articles/studies did they find? d. What inclusion/exclusion criteria did they adopt in order to consider or not a literature study in their research? e. How many articles did they excluded? 2) A flow chart resembling the main steps of the evaluation of literature background, inclusion/exclusion criteria, number of studies considered/excluded, should be provided. 3) A table gathering all the main characteristics of the studies considered, their outcomes, their results, etc should be provided in order to easily recognize the features of the present works. 4) The author should better consider the limitations of the studies considered. Within biologics section, she should better revise the studies considered, the limited number of patients that entered the studies and the limited results coming from such researches. Please comment about.

COMMENTS TO AUTHORS

The paper is well written. Minor revision is needed. Did the author use PubMed search? What were the key words? Please describe.
