COMMENTS TO AUTHORS

This is a good original research article that demonstrates that ERG is a specific and sensitive diagnostic biomarker for hepatic angiosarcoma. Moreover, ERG is a more sensitive and specific diagnostic biomarker for hepatic angiosarcoma in comparison to CD31, CD34 and FVIIIIRAg. However, I have some specific recommendations and questions: - The ERG as the others biomarkers CD31, CD34 and FVIIIIRAg is not useful in distinguishing hepatic epithelioid hemangioendotheliomas from hepatic angiosarcoma. - In references, check the link there are some are not correct.
