## COMMENTS TO AUTHORS

A well-done and extensive review about the current status of laparoscopic surgery in rectal carcinoma. A great number of different aspects are highlighted, e. g. morbidity & mortality, OR duration, conversion, intraoperative blood loss, length of hospital stay, bladder & sexual dysfunction, postoperative bowel function recovery as well as postoperative pain. Additionally also late complications as adhesion formation and incisional hernia rates were analysed. There are reference links in the text, which probably must be deleted.
