## COMMENTS TO AUTHORS

The manuscript reports a case of stomach plexiform neurofibroma. It is publishable, however, the English needs to be edited. The authors should add more information on histological diagnosis, including on the confirmation on the diagnosis. Is there any changes in the NF1 gene or its expression in the tumor? If the tumor is associated with NF1, the analysis of tumor tissues on this gene is warranted.

### COMMENTS TO AUTHORS

This is a nice and short case report. The authors should indicate informed consent from the patient to publish the case. Figures 2 and 3 would be enhanced by adding arrows indicating the mass in stomach. Figure 4 would benefit from an additional picture with higher magnification.
