COMMENTS TO AUTHORS

The manuscript untitled "Adriamycin influence on changes of Nanog, Oct-4, Sox2, ARID1 and Wnt5b expression in cancer stem cell" is very well written. In this study, the authors reported genes expression of Nanog, Wnt5b, Oct4 and Sox2 and ARID1A in two hepatoma cell lines comprehensively and systematically in order to explore the molecular mechanism of recurrence and metastasis of hepatocellular carcinoma. And the accurate markers and targets for stem cell-targeted therapeutic intervention also were detected. Some minor suggestion: 1 Some minor language polishing should be corrected. 2 Two many figure numbers, some of them can be combined to one. 3 The results are well discussed.
