COMMENTS TO AUTHORS

The manuscript by He et al is very interesting. In this manuscript, the authors investigated the clinical significance of expression of tissue factor and tissue factor pathway inhibitor in ulcerative colitis. Ulcerative colitis is associated with hypercoagulable states, microthrombus formation may be an important mechanism of pathogenesis of ulcerative colitis, and persistent hypercoagulable states may be related to clinical progression of ulcerative colitis. The pathological process and clinical complications of diseases with thrombosis are closely associated with tissue factor and tissue factor pathway inhibitor. Some minor revisions needed. 1 The results section of the abstract should be more informative with detailed data. 2 "Introduction" is missing. 3 The results were well discussed. 4 The references should be updated.

COMMENTS TO AUTHORS

Very well written manuscript. Only the reference list should be updated.
