COMMENTS TO AUTHORS

In this manuscript, the authors try to determine the quality of life improvement in choledocholithiasis patients who underwent EST compared to OCT for choledocholithiasis in a single tertiary care university hospital. The manuscript is very well written, after some minor revision, it can be accepted for publication in the journal. 1 Some minor language polishing should be checked by a native English speaker. 2 Tables and figures are good. 3 the ref. list can be updated.
