## COMMENTS TO AUTHORS

This paper presents a focused survey on small bowel capsule endoscopy (CE) in the diagnosis and management of iron deficiency anemia (IDA) in elderly. The previous studies are well presented, and the summary of results in Table 1 is particularly useful. The structure of the paper is a bit confusing with regards to the comparison of CE with other modalities. There is a section entitled "CE COMPARED TO OTHER MODALITIES" and later there is another section entitled "CE VERSUS DEEP ENTEROSCOPY FOR IDA IN ELDERLY", which compares CE with deep enteroscopy. To my opinion all comparisons of CE with other modalities should be gathered in a single section organized in subsections per modality. The authors should also include relative economic costs in their comparisons.
