COMMENTS TO AUTHORS

The authors of the manuscript entitled "Treatment of Crohn's Disease in Pregnant Women/ Drug and Multidisciplinary Approach. " discuss an important problem not only for doctors taking care of patients with IBD but also for the patients themselves. The knowledge of the toxicity of medications used during pregnancy and breastfeeding time as well their potential negative influence on immunological system in newborns is crucial for both doctors and women who plan pregnancy. The good understanding of the impact of glucocorticosteroids, immunosuppressants and biological treatment on pregnancy allows to clarify doubts of pregnant women with IBD. It would be indicated to present in this manuscript recommendations of pharmacotherapy during pregnancy in patients with IBD basing on American, European and other countries' guidelines. If the guidelines do not include such an information it should be also mentioned in the manuscript. The presentation of these guidelines will increase the value of this publication.

COMMENTS TO AUTHORS

Paper has been written to identify the treatment of CD or UC in cases with pregnancy and breastfeeding. Although this paper is important in the management of these cases there are many problems in this paper: 1-Paper is very chaotic and it is impossible to understand what is the matter 2-It will be useful to make a "contents page" to follow the parts of the paper. All the drugs used in these 2 diseases must be categorized and safety / toxicity profiles must be written with detail 3-Recent data at this matter must be added 4-There are many typographic and grammatic errors

COMMENTS TO AUTHORS

This is an interesting review that focused the treatment of Crohn's disease in pregnant women. I would suggest to cite the number of corresponding references for each observation in table 31.1 and for each recommendation in table 31.2. There are several there are several typographic and grammatical errors for example: - In Biological Therapy section, please change ertolizumab pegol (category B) into Ertolizumab pegol (category B) - In Biological Therapy section, please change Golimumab: into Golimumab - Please also use an italic character to write Golimumab at the head line - In table 31.2 please change Recommendation into Recommendations Finally why the tables are identified as Table 31.1 and table 31.2? I would suggest to identify the tables as Table 1 and Table 2.

COMMENTS TO AUTHORS

Very interesting review of the treatment of crohn-pregnancy in a situation where decision-drug may harm the fetus, so this review and recommendations may be of interest in clinical practice. It would be interesting to add algorithms or recommended by medical specialty societies protocols
