COMMENTS TO AUTHORS

The authors evaluated many articles and they explain all of them in the text format but The manuscript did not contain any table , it's better to use tables for reporting of some results and explain them briefly in the text. It's better to explain about IBS C and IBS D and their drug groups in methods . It should also been described in the abstract. The article doesn't have key word The manuscript doesn't have any conclusion in abstract part and in the end of the article It seams This manuscript needs major revision for publication Fariborz Mansour-Ghanaei M.D, AGAF. Professor of Medicine Division of Gastroenterology & Hepatology Director,Gastrointestinal & Liver Diseases Research Center(GLDRC), Guilan University of Medical Sciences(GUMS),Rasht,Iran

COMMENTS TO AUTHORS

This is a nicely written article, of use to many looking after this kind of patient. Some of the paragraphs are enormously long, and could be shortened, in order to improve the reading quality of the MS. There seems to be some doubt about the references in the section on LX-1031, which needs attending to. Given the recent explosion about non-gluten sensitive coeliac disease, it might be worth adding a comment about that, and what role these authors think a gluten free diet plays in the management of those with explosive wind symptoms in the abdomen.

COMMENTS TO AUTHORS

This comprehensive review of various treatment options of IBS is well written. The major weakness is a lack of a summary paragraph at the end. Other weakness include: 1. Need a list of abbreviations because of the extensive usage. 2. Because of the effect of placebo in various clinical trials, it would be helpful to describe the components in the placebo of each study. ?
