COMMENTS TO AUTHORS

The article is well written and the idea is new for pancreatic cancer. However, an updated quotation about survival in pancreatic cancer and the latest article about the involvement of androgen receptors in fibrogenesis (eg. Castoria et al.PLoS One. 2013 Oct 9;8(10):e76899.) should be added

COMMENTS TO AUTHORS

This is an interesting concise review on androgen receptor signaling in hepatocellular carcinoma and the putative role of AR in pancreatic cancers. I still have some reservations on the role of AR in pancreatic cancers in females and this is not really addressed in the literature. However, it is often useful to have speculative and stimulating opinions in such reviews which may provoke new investigations.

COMMENTS TO AUTHORS

Kanda T et al. reviewed a relations between androgen receptor signaling and hepato-pancreatic cancer. The review was very nicely written. However, no scheme and figs made reader difficult to understand all the concepts that the author presented. Although it was invited by the Editor-in-Chief, scheme of the relations and signaling of each cancer should be presented. Otherwise, it was very nice.
