COMMENTS TO AUTHORS

This is a very interesting work about HDGF and gallbladder cancer, but the similar work has been published in medical oncology 2013;30(2):587. by another research group.

COMMENTS TO AUTHORS

-All paragraphs must start in the same manner in terms of position in relation to the margins. -Last line of the first paragraph of the results says:"...HDGF is not only overexpressed in GBC but that it is also highly activated".It would be adequate to explain what is the difference between overexpressed and activated. -Third paragraph of results section says: "Among the 40 GBC patients, the survival information was obtained through phone calls." This information belongs to the methods section not results, as well as any information related to how the study was performed.
