<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

Genes - diet interaction in gastric cancer risk is a good review article. The author search and read more 60 related article from year 2000 to 2003 in PubMed, EMBASE, and MEDLINE, including 38 research results and some reviews. There were more research and report on diet and cancer of the stomach or gene mutation and gastric cancer, but a systemic review the relationship between genes-diet and gastric cancer is less, although there is no innovative findings, but so comprehensively reviewed is also very meaningful, And the author made a carefull comparison and analysis overallly, very valuable。 many researchers may focus on one aspect of the research, may not be so comprehensive study, and this review can give you a reference. Based on the above comments and Suggest your publish this review.
