COMMENTS TO AUTHORS

The study Rostain F et al aims at providing trends in incidence, management and survival of cancer of the ampulla of Vater (CAV) in a well-defined French population. The study is original given the fact that CAV is a rare cancer. The statistical methodology is appropriate. Comments 1. Please write a paragraph in the discussion section regarding the potential etiology of CAV based on epidemiologic studies if possible. 2. Please discuss why the incidence of CAV showed a substantial increase in men over the study period.

COMMENTS TO AUTHORS

The manuscript entitled " Trends in incidence and management of cancer of the ampulla of Vater" is a thoroughly reviewed article on the Prevalence, Incidence and management of cancer of the ampulla. The concerns are: 1. Incidence and management of cancer of the ampulla of Vater can be tabulated on the basis of years of study and the advancement of the understanding of the disease, by incorporating the reference numbers as a last column on the in all the Tables. 2. This will not only make the data quickly readable and citing the back references will precisely add an invaluable effort to this article but will also ensure increased readability of this journal by other investigators. 3. Although it appears that Authors have collected enormous evidences to support the article, it will be necessary to increase the number of situations, in order to make a real effort in the form of an original article. 4. On the whole, the manuscript is worth accepting and promises a large number of readability. Minor Corrections: Please check the English and Grammar throughout the article before resubmitting.
