COMMENTS TO AUTHORS

Optimizing clarithromycin-containing therapy of *Helicobacter pylori* in the era of antibiotic resistance. Molina-Infante J and Gisbert JP. **GENERAL COMMENTS:** The authors have compiled a review of the current literature regarding treatment of *H. pylori* infection. They have considered different treatment regimens: Traditional 7-day triple therapy, extended duration therapy, sequential therapy, quadruple therapy and some others. The review is up to date, comprehensive and well written and ends in a suggested algorithm for treatment under different antibiotic resistance scenarios. Table 1 should be altered to resemble Table 2, with an additional left column that contains the first author and the publication year. Minor points: A number of small printing errors must be corrected. The repeated use of the word “albeit” may be reconsidered.

COMMENTS TO AUTHORS

Dear editor I read this manuscript carefully .the H.pylori eradication is an important field of interest in gastroenterology this is an interesting review article in this field but I think the references from Asia is not adequate and needs more references As you know stile we have problem with treatment of H.pylori due to resistance during time Best

COMMENTS TO AUTHORS

authors evaluated the helicobacter eradication protocols from the point of antibiotic resistance. although the manuscript is well written with good literature summary, the conclusions and recommendations are too strict and certain. additionally concomitant treatment is over emphasized
