COMMENTS TO AUTHORS

Reviewers' Comments to Author: The authors demonstrated that CAP detection is a highly effective method to evaluate the steatosis rate of patients with hepatitis B virus infection. This study is interesting and worthy to be published. However there are several problems in this manuscript. Major 1. Whether the accuracy rate of diagnosis of CAP would change if the patients suffered from fatty liver in the same time. 2. Because the accuracy rate of diagnosis in patients with mild steatosis based on CAP measurement was relatively lower, how to detect steatosis combined with other techniques?
