COMMENTS TO AUTHORS

I read the manuscript named "Is splenic hilar lymph node dissection necessary for advanced upper gastric cancer without serosa invasion? - Analysis of 108 consecutive laparoscopic spleen-preserving total gastrectomy at stage cT2-3" (ESPS Manuscript NO: 8797) and my recommendations are as follows. Title: It accurately reflects the major topic and contents of the study. Abstract: Adequate, summarizing the topic. Methods: Convenient with the purpose of the study. Discussion: Topics has been discussed with all aspects. References are appropriate, relevant, and updated. Tables and figures are reflects the major findings of the study, and they are appropriately presented. This manuscript is well written and documented. There is typological error on the 26th line of Materials and Methods (Patients) of manuscript (it is written mode, it should be node). Also, this manuscript gives additional new knowledge to the literature. I think that this manuscript is suitable and worth to be published in World Journal of Gastroenterology.
